

Hello Mr. Cobley,

My name is Amy and I handle insurance for Dr. Danny Weiss.

The most common code we use is D7280 (surgical access of an unerupted tooth).

When I submit to insurance, they want to know what tooth numbers he lasered.

So far, only Cigna requests before/after pictures and sometimes a narrative.

We also use code D7283 (placement of device to facilitate eruption of impacted tooth).

Dr. Weiss uses this when placing a bracket on a tooth. Most companies pay 40-80% per tooth per lifetime; however I always call to verify that before we laser. Dr. Weiss has never encountered any upset patients regarding a charge. They always see the need for it and are fine with the charge. I hope this helps. Please let me know if I can assist you with anything else!

Amy
